

MUELLER®

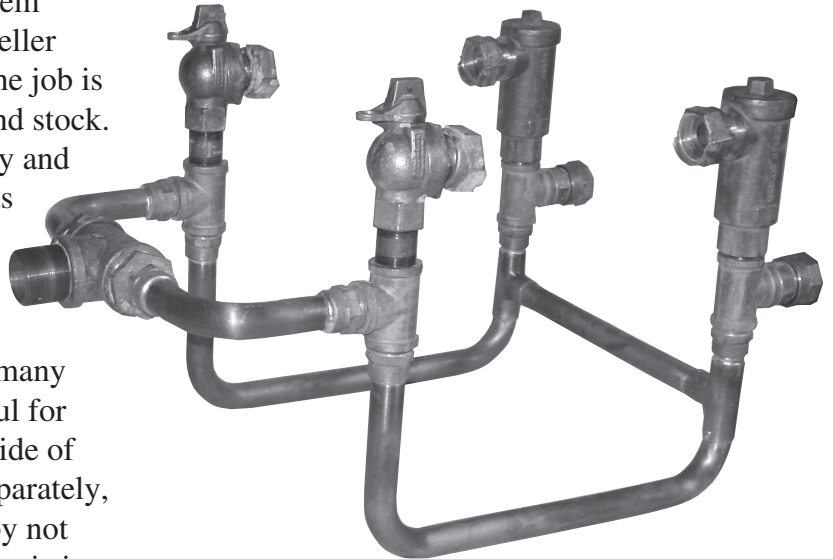

Dual Meter Setter

Compact • Ideal for Irrigation Applications

Simplify and save time installing tandem meters with this fully assembled Mueller setter. With just three connections the job is done, and there are fewer parts to handle and stock. The resulting installation is much less bulky and more stable than when separate components are used, eliminating the potential for movement or vibration, without needing added bracing.

This style of Mueller setter can be used in many tandem installations, and is especially useful for irrigation systems. It allows the irrigation side of the service to be controlled and metered separately, providing potential savings for the owner by not having to pay extra treatment charges for the irrigation water used.

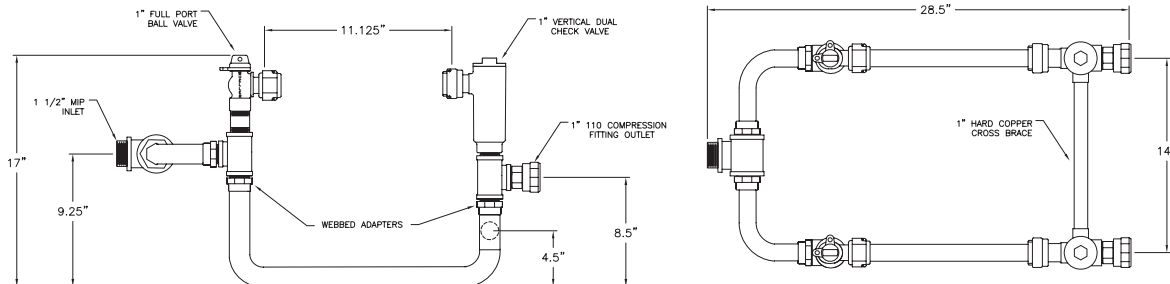

This convenient Mueller setter is available with a 1" or 1-1/2" inlet for use with two 1" meters, or a combination of 1" and 5/8"x3/4" meters. Angle ball valves with lock wings allowing independent control of each meter are standard. For back-siphonage

Optional ASSE dual check valves shown

or cross connection protection, especially important for irrigation applications, ASSE dual check valves on the downstream side of each meter are available as an option.
